before-feedback.jpg / after-feedback.jpg

My one feedback giver (Noelle Jung):
-Add color! [I will!]
-Use more icons to represent/supplement navbar links
-Merge the top navbar contents into the current sidebar (shown in follower stream wireframe) and get rid of top navbar altogether
-Only display this navbar on internal pages (i.e. not on user profile)
-Need page forward/back buttons (currently no way to navigate back and forth, unless implementing infinite scroll)
-Remember to include a follow/unfollow/block button
-Consider including an about me section of profile (and therefore on the edit profile page)

Other Notes:
-I drew the wireframe in more detail for the before version; the after version just shows some rough changes based on the feedback. No feedback was given for the register/ login page, so I didn't redraw those views.
